CONFIGO

Q.S.
QUALITY & SAFETY

The Problem **Opus Quality & Safety** Solves for Our Clients

We enable our clients to integrate automated and intelligent outcomes benchmarking seamlessly into clinical and administrative workflows, enabling more effective decision making and amplifying return on your existing data investment.

> "We found existing solutions to be costly and hard to use with low trust in the data. Opus redefined what we thought possible. It improves our data quality, automates benchmarked insight, and integrates into our workflow. I don't know how we did without it for so long."

Rahul Shah
Senior Vice President , Children's National Hospital-Based Specialties Center
Children's National Hospital

CLIENT USE CASES

Benchmarking

Question: How do we present pediatric-specific, timely, and risk adjusted outcomes to our clinical and administrative leadership?

Our Solution: Configo delivers easy-to-access, AI-driven quality and safety outcomes, with custom benchmark groups allowing you to compare, in near real time, with peer children's hospitals.

Automated Custom Reports

Question: How can my team communicate our readmission rates effectively and on a regular basis to departments in which we've invested in additional nursing resources?
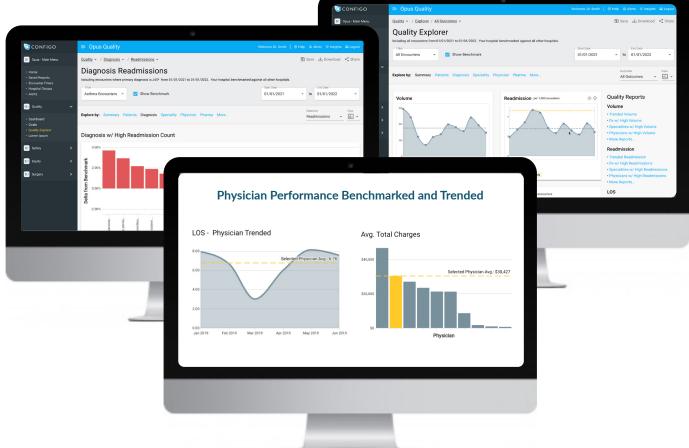

Our Solution: The quality team is able to schedule automated push reports showing readmission rates by diagnosis group, including comparison to peer groups for distribution to leadership and steering groups.

Quality Outcomes Analysis

Question: How do we determine where to focus our quality improvement efforts and set meaningful goals?

Our Solution: Configo performs a custom Quality Outcomes data assessment for each organization to identify areas of opportunity and success. A custom dashboard can be used to monitor key focus areas aligned with organizational goals.

Differentiators

Pediatric Specific: Built by and for children's hospitals, reflecting pediatric data reality

Automated Insights: AI-driven insights with automated reporting of key trend variation

Custom Benchmarking: Dynamic case mix driven, pediatric-specific grouping

Pediatric TotalView™: By breaking down data silos, we tie your initiatives to improvements in clinical outcomes, patient satisfaction, and staff experience

Ease of Access: Tablet and desktop

Reduced Latency: With data processed within 7 minutes of receipt, latency is reduced to days, not months

Push, Not Pull: A focus on automatically pushing relevant insight to those who can use it, rather than expecting you to log into our tool

Opus Quality & Safety is a part of the Opus suite of interconnected products, which uniquely allow our clients to seamlessly connect outcomes across modules. Want to understand the correlation between surgical outcome, re-admission, and the patient experience, for example? Now you can. Data silos serve nobody but vendors. **Let's break down the barriers.**
