# CONFIGO

# Opus Credentialing (for OPPE and DNV)
## Using Data to Inform and Inspire

**Opus Credentialing**
**Meaningful Data**
**Automated Reporting**
**Streamlined Process**

## The Problem **Opus Credentialing** Solves

To meet credentialing requirements pediatric hospitals are forced to develop their own resource intensive processes that are inefficient and at risk of error. Configo's solution provides an alternative: we leverage your existing process, automate it with digital report creation, tracking and collaboration that provides Joint-Commission and DNV ready results.

> **Our OPPE process was inefficient and had no connection to our Quality & Safety work. We wanted to change that. Configo has transformed our process, integrated it with our broader improvement efforts and freed up resources to focus on transforming patient care.**

## CLIENT USE CASES

### Efficiency

**Problem:** How would Configo make the credentialing process more efficient?

**Solution:** Opus Credentialing is a digital solution that enables you to do less "paper" measurement and reduces the number of files around the organization, accelerating your workflow.

### Driving Quality Improvement

**Problem:** Our credentialing process is completely independent from our quality and safety improvement efforts.

**Solution:** By integrating benchmarked quality and safety outcomes into the credentialing workflow, you have the option to present this data to clinicians to drive improvement.

### Compliance

**Problem:** How do we ensure that we are meeting all necessary requirements?

**Solution:** Opus Credentialing provides summary-level and provider-level reports that can be immediately accessed digitally (or printed for hardcopies) during regulatory visits.

# Differentiators

**Pediatric Focused:** Built by and for children's hospitals, reflecting pediatric data reality

**Automation:** Turn manual tasks into a streamlined process that enables you to derive value quickly

**Expand Your Resource Capacity:** Leverage Opus Credentialing to do some of the manual work for you, making it feel like you have an extra set of hands

**Tracking:** The ability to visualize the status of each step of your process and provide the capacity to fully audit when necessary

**Benchmarking:** Enabling you to compare each provider to their peers to make appropriate credentialing decisions

**Ease of Access:** Desktop, tablet and mobile

**Opus Credentialing** is part of the Opus suite of interconnected products, which uniquely allow our clients to seamlessly connect outcomes across modules. Want to understand the correlation between surgical outcome, re-admission, and the patient experience, for example? Now you can. Data silos serve nobody but vendors. **Let's break down the barriers.**
